## TURBOCHARGED WATER- PROOFING NEEDED?

MAXIMUM CRACK BRIDGING – TURBOCHARGED DRYING  
PCI BARRASEAL TURBO

The tried and tested two-component reactive waterproofing system. The ace up your sleeve when you need to provide reliable waterproofing for buildings – even with awkward geometries

BUILDING TRUST

# PCI BARRASEAL TURBO

The tried and tested two-component reactive waterproofing membrane – ideal for the flexible waterproofing of surfaces and foundation walls, as well as for damp-proof courses (in accordance with DIN 18533) and for bonding protection, drainage and insulating boards on new-build and refurbishment projects.

## The benefits at a glance:

### ■ Enhanced anti-sag properties

For good shape retention without sagging

### ■ Improved crack bridging, now up to 4 mm

For maximum protection in the event of later cracking of the substrate

### ■ Supple application and easier smoothing

For efficient working without excessive force

### ■ Adjustable, variable consistency

For spraying, or application using a roller or brush – you can set the consistency you need

### ■ Fast drying

Rainproof after about four hours and the trench can be filled after about six hours

### ■ Reduced CO<sub>2</sub>-footprint

For climate friendly waterproofing without sacrificing convenience or performance
