

## PRESS RELEASE

Augsburg, 02.02.2026

New product with light filler technology for less weight and more coverage

### **Innovative tile adhesive PCI Flexmörtel Light covers twice the ground**

**Augsburg, February 2, 2026 – With PCI Flexmörtel Light, PCI, a Sika company in Germany, is launching a new product in 12.5 kg sacks that offers twice the coverage of conventional tile adhesives thanks to innovative light filler technology. In addition, the new lightweight adhesive features especially convenient processing properties, it can be applied easily with little force and has a smooth consistency. The sustainable product is suitable for multi-purpose use with all ceramic coverings on walls and floors.**

PCI Flexmörtel Light is suitable for indoor and outdoor use. The new product can be used for laying all types of ceramic tiles including natural stone not susceptible to staining and large slabs, in a thin or medium bed.

The latest generation of tile adhesives with light filler technology is available in sacks weighing only 12.5 kg and therefore covers twice the ground compared with conventional tile adhesives in a 25 kg sack. Specially developed lightweight aggregates reduce the weight of the mortar considerably at the same time as improving its yield without sacrificing its high adhesive power and strength. Using 8 mm notched trowels, tilers can cover about 10 m<sup>2</sup> per sack, the same area as with a 25 kg sack of conventional adhesive.

**BUILDING TRUST**

Lighter sacks mean that tilers need to carry less weight, relieving the strain on their back and joints. Apart from reducing the physical load, this also cuts CO<sub>2</sub> emissions during transport.

In addition, tradespeople benefit from especially convenient processing properties – a smooth, creamy consistency and easy application combined with high stability and very good non-sag properties. The open time is very long, at about three hours, and the surface can still be used and walked on the next day.

- PCI Flexmörtel Light is a low-dust, CO<sub>2</sub>-reduced tile adhesive, classed as a very low-emission product, with the EC1 Plus seal of approval. It therefore makes a contribution to healthy living and environmental compatibility.

“Our innovative PCI Flexmörtel Light sets new standards. It makes work much easier. The new product has a smooth consistency and can be applied with very little force.

- The 12.5 kg sacks make carrying and handling on site as well as transport much easier. In addition, this product has a very high yield. The same area can be covered with only half the weight. To sum up, you can carry less, work faster and more easily and make quicker progress,” says Fabian Ladenburger, Head of Marketing, Construction Material and Tile Dealers, outlining the benefits of the new lightweight adhesive.

PCI already set new standards and gained market leadership in the tile adhesive segment 40 years ago with the first flexible PCI Flexmörtel in its yellow bag. The product name “Flexmörtel” has shaped the industry and become a synonym for flexible tile adhesives in Germany. On the basis of its special properties, PCI has continually developed its range of flexible tile adhesives.
